Foreword

The standard is formulated in order to implement the *Environmental Protection Law of the People's Republic of China* and the *Law of the People's Republic of China on Prevention of Environmental Pollution Caused by Solid Waste*, prevent environmental pollution caused by hazardous wastes, strengthen the management on hazardous wastes and protect the environment and human health.

The standard is a constituent part of the national identification standards for hazardous wastes. The national identification standards of hazardous wastes specified the technical indicators of hazardous characteristics for solid waste, the solid waste with hazardous characteristics in compliance with the technical indicators specified in the standard belongs to hazardous wastes, and it must be managed as hazardous wastes according to law. National identification standards for hazardous wastes are composed of the following seven criteria:

- | | |
|--|---|
| 1. Identification standards for hazardous wastes | General specifications |
| 2. Identification standards for hazardous wastes | Identification of corrosivity |
| 3. Identification standards for hazardous wastes | Screening test of acute toxicity |
| 4. Identification standards for hazardous wastes | Identification of leaching toxicity |
| 5. Identification standards for hazardous wastes | Identification of flammability |
| 6. Identification standards for hazardous wastes | Identification of reactivity |
| 7. Identification standards for hazardous wastes | Identification of standard toxic substances content |

The standard revised *Identification Standards for Hazardous Wastes—Identification for Corrosivity* (GB 5085.1-1996), the main content is added with the identification standards and inspection methods of steel corrosion.

In accordance with the provisions of relevant laws, this standard has the effect of constraint enforcement.

The standard is issued by the scientific and technical standard department of State Environmental Protection Administration.
