Foreword

This Standard was drafted according to the rules of GB/T 1.1-2009.

This Standard replaces JB/T 10380-2002 Pipe Belt Conveyor. Compared with JB/T 10380-2002, the main technical changes are as follows:

- ADD 400mm, 560mm, 630mm, and 800mm pipe diameters (see 3.2.1);
- ADD the pulley length parameter (see 3.2.3.2);
- ADD the roller length parameter of idler set (see 3.2.4.2);
- ADD the regulations of relationship between filling factor and particle size (see 4.2);
- ADD the requirements of design life for the pulley bearing (see 4.5.13);
- INCREASE the service life of idler rollers, and DECREASE their damage rate (see 4.6.9, 4.3.8 of Version 2002);
- ADD the requirements on conveyor belt (see 4.7);
- ADD the surface adhesive and primer performance tests of the rubber covered pulley (see 5.6);
- ADD the packaging technology requirements on pipe belt conveyor (see 7.2).

This Standard was proposed by China Machinery Industry Federation.

This Standard was under the centralized management of National Technical Committee of Continuous Handling Machinery Standardization (SAC/TC331).

Pipe Belt Conveyor

1. Scope

This Standard specifies the type, basic parameters, technical requirements, test methods, testing rules, marks, packaging and storage of the pipe belt conveyor (hereinafter referred to as the Conveyor).

This Standard applies to the Conveyor, which continuously conveys various bulk or granular materials and other loose materials. As for the Conveyor, six or eight idler sets form a regular polygon to force the conveyer belt to form a pipe shape.
